

Using Internet Explorer 8 with Blackboard

DePaul computer labs and other computers maintained by IS were recently upgraded to Internet Explorer 8. A problem exists when viewing Blackboard courses with Internet Explorer 8, causing them to display without the proper formatting. Please follow the instructions below to solve this problem.

1. Browse as you normally would to your Blackboard course.
2. When you encounter a security warning matching the one displayed below, click **No**.

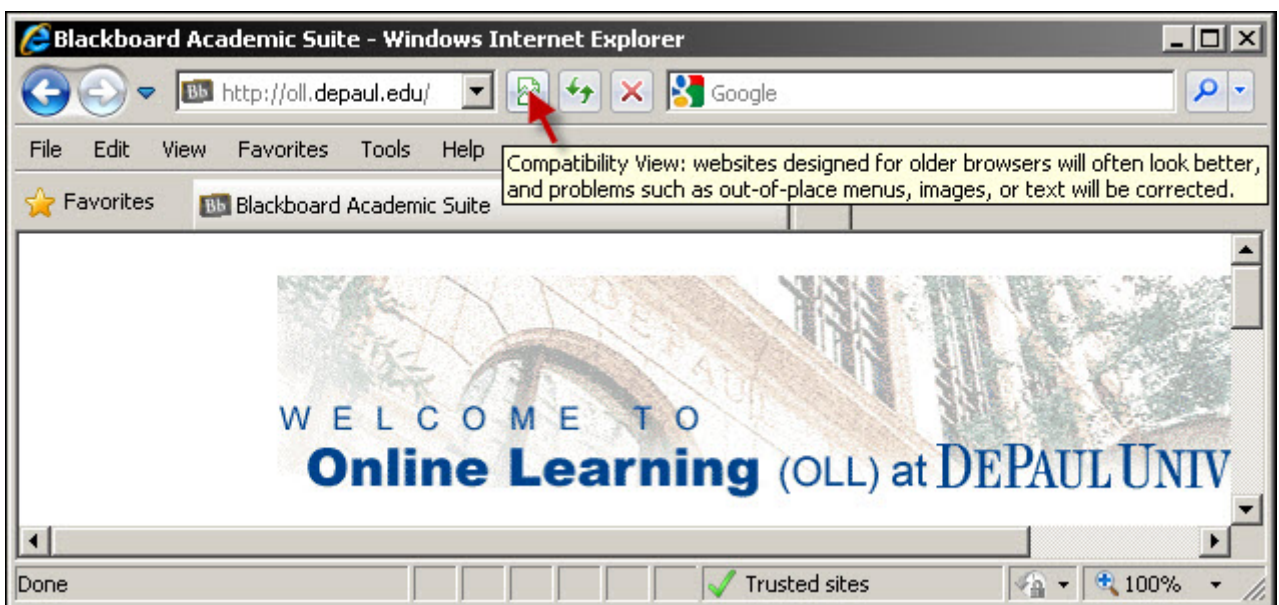

Please note that you should only choose **No** on depaul.edu domains. You will likely want to click **Yes** on unaffiliated sites.

3. The course page will load and should properly display.

If you experience other problems viewing a Blackboard course and do not see the security warning prompt, use the compatibility view in Internet Explorer 8.

1. In the browser window, click the **Compatibility View** button in the toolbar at the top, to the right of the address bar.

2. Continue browsing as you normally would.
